

Animal Watching

Animals are wonderful. If you look closely at how they live you will find many surprises. It is hard to look closely at insects. They are very small. Many of them fly away when you come near. But if you have a chance to watch them you will find how they live. Watching animals is a job that **scientists** do. It is called making observations. They have learned a lot about animals.

Scientists learned about tiny animals. They have studied insects. They found that insects have tools. They use those tools to live. They learned about the **sawfly**. This is just one animal they have studied.

Imagine what the sawfly is like. It is a fly but not like many others. They call it the sawfly because it has a kind of saw. It's not a real saw. But it looks like one. And it works like one. It is part of the sawfly. The sawfly uses the saw to make places where the eggs will be safe. It saws at plants. So, it makes a place where the eggs can go. Then the sawfly does something very special. It makes a sort of homemade glue that fastens them where they are laid. We are not sure how it does that. But if you can watch the sawfly you will see this happen.

Some insects have cutting instruments that work just like scissors. The **poppy-bee** is one of them. It is a bee that makes its home in wood. This bee has a boring tool, too. It uses the tool to bore into old wood. It looks like a tool that a carpenter uses. Carpenters make things out of wood. The poppy-bee makes its nest out of wood.

Scientists observe birds, too. They have seen birds use their bills to get what they need. Some birds use their bills to cut into wood. They have sharp bills. They can cut a hole in a tree. They drill the hole to get inside the tree where insects live. Then they eat them.

Every animal is **amazing**. Even dogs and cats can surprise you. The more you look at animals the more you will learn. Nature is full of surprises. Every part of every animal has a purpose. Scientists learn more about them every day. Nature is a wonderful part of our world. Scientists have studied nature and written books. They help us know more.

Text Dependent Questions

Animal Watching Text Dependent Questions

Directions: Choose the best answer for each question.

1. What does a **scientist** do?
 - a. a scientist makes observations
 - b. a scientist read about history
 - c. a scientist makes computer programs
 - d. a scientist makes airplanes

2. What does a **summary** tell?
 - a. everything about an animal
 - b. what is important about the topic
 - c. all the details about the topic
 - d. the title of the article

3. Which of these is the best summary of the **first** paragraph?
 - a. Insects fly.
 - b. Scientists have jobs.
 - c. Scientists study insects.
 - d. Insects are special.

4. Which of these is the best summary of **paragraph 3**?
 - a. The sawfly looks like a saw.
 - b. The sawfly flies fast.
 - c. The sawfly is a special insect.
 - d. The sawfly lays eggs.

5. Which of these is the best **summary of the passage**?
 - a. Dogs and cats are special.
 - b. There are many animals.
 - c. Scientists have learned a lot about animals.
 - d. People read books to learn.
